*ANALYSIS OF BASIC APPROACHES TO CLASSIFICATION OF RECREATIONAL
RESOURCES AS THE BASIS OF FORMING A REGIONAL RECREATIONAL COMPLEX*

The purpose of the study lies in the identification of the main approaches to the definition of the concept of recreational resources and their classification in order to identify the resource basis of forming a regional recreational complex.

Methodology. Analytical, comparative, historical and literary research methods have been used to fulfill the main tasks of the research .

Results. The existing approaches to the definition of the essence of recreational resources have been analyzed. The basic criteria of classification of recreational resources have been determined. The basic characteristics and properties of recreational resources as well as the areas of their use for the organization of recreational activity have been considered .

Scientific novelty. The definition of the concept of recreational resources has been further developed, and the most important approaches to the classification of recreational resources have been specified.

Practical significance. This research serves as the basis for the study of recreational potential as well as for further substantiation of the creation of a regional recreational complex. In addition, the results of the study can be used in the educational process while training specialists in recreation and tourism.

Key words: recreational activity, recreational resources, classification of recreational resources, regional recreational complex.
