GEOGRAPHICAL ANALYSIS OF EXTERNAL LABOR MIGRATIONS FROM UKRAINE

The purpose of the article lies in socio-geographical analysis of external labor migrations from Ukraine to European countries.

Methodology is based on searching, processing and presentation of statistical information which describes the migration process. The main methods are descriptive, analytical, mathematical-statistic.

Results. The current state of external labor migrations from Ukraine, their dynamics, scale, regional structure, main causes and transformations to develop an effective migration politics has been clarified.

Scientific novelty lies in identifying stimulating factors of external labor migration of ukrainian people, the scale, structure and directions of external labor migration of the ukrainian population in the modern period.

The practical value lies in the fact that the causes, scale, structure and geography of external labor migration are disclosed, that is the basis for conducting socio-economic procedures to prevent external migration processes at the regional level.

Key words: external labor migration.
