CREATION OF THE WEB-MAP OF THE BOGUSLAVSKY DISTRICT

The goal is to develop a tourist interactive map "Landmarks of Bohuslav".

The methodology. The methodological and theoretical basis of the study is modern geographical and cartographic science in the field of thematic mapping with the involvement of web-mapping technologies.

Results. A large-scale tourist web map of the cultural heritage of the Boguslavsky region - "Sights of Boguslavshchina" was created.

Scientific novelty. Approbation of the methodology and technology for the development of interactive large-scale web maps of tourism topics involving the Leaflet JavaScript library.

Practical value. An interactive tourist web map of the historical and cultural heritage sites "Sights of Bohuslavshchina" will be published on the website of the health-improving institution of sanatorium-type "Chaika". Convenient using, visualization, prompt receipt of information will help to increase the attractiveness of tourist Boguslavschina routes.

Keywords: web-mapping, interactive map, Leaflet JavaScript libraries.
